Inmates puff up budget

By John Davis
Montgomery Advertiser
Alabama.com

It is the most popular cigarette brand among Alabama state inmates, and it's the one they can't buy outside the prison walls. Smoking is a favorite pastime for many of the state's prisoners, and it's a habit that has helped the Department of Corrections (DOC) make payroll and cover other expenses.

Corbett said the prison shops would release programs and other activities help the department close what is typically a \$50 million deficit annually.

At the same time, DOC is spending \$47 million this year for inmate health care plus overages in the millions.

The toll that tobacco is making on the state's prison is hard to gauge, but nationwide, with about 22 percent of the population constantly sinking departmental budgets, a budget that needed more than \$20 million from the state this year to make payroll and cover other expenses.

Corbett said the prison shops would release programs and other activities help the department close what is typically a \$50 million deficit annually.

The toll that tobacco is making on the state's prison is hard to gauge, but nationwide, with about 22 percent of the population constantly sinking departmental budgets, a budget that needed more than \$20 million from the state this year to make payroll and cover other expenses.

Inmates: State relies on tobacco tax income

Lighting up: The U.S. Centers for Disease Control reports "in the United States, cigarette smoking results in \$157 billion in direct and indirect medical costs, or more than \$300 per person, every year."

Tobacco companies pay states for the problems their products cause through a tobacco settlement involving almost every state. In Alabama, the settlement and the state's tobacco taxes combined amount to about \$180 million a year.

Statewide, including in prisons, smokers pay the state \$4.25 a standard carton of cigarettes. In addition, many local governments also have their own taxes. With the large influx of money from tobacco, Alabama still spends only about \$325,000 a year on tobacco cessation programs.

Montgomery resident Carl Nowell has been a longtime volunteer in state prisons. He was part of a recent push to curb smoking at the 1,400-inmate Kilby Correctional facility in Mount Meigs.

"A large percentage of (inmates) smoke," Nowell said. He got some help from the Department of Public Health to put the Kilby stop-smoking program together, and he hopes to do another one. Meanwhile, inmates keep lighting up. "Cigarettes are money," said Shippen. "So are stamps. In fact, just about anything you can think of is money (in state prisons)."

Case # 2:05-CV-578-

Air Pollutant

Tobacco smoke is an air pollutant.

Air pollution - has resulted in an increased number of deaths among people with cardiac and respiratory diseases

A striking increase on the number of deaths among the persons who already suffer from heart and chronic lung disease.

- I. Increasing number of people becoming ill with Chronic Respiratory Disease.
- II. Stepped up severity of asthma attacks.
- III. More acute bronchitis, pneumonia and other chest illnesses among adults.
- IV. Cancer of the Lung.
- V. More deaths among people who are hospitalized with heart attacks. One study has indicated that angina patients developed pain more rapid at times.
- VI. Irritation of the eyes, nose, and throat, changes in behavior and heart function.

Other studies have indicated reduced lung function in middle-aged non-smokers exposed to smoke

Lung Cancer

Cancer begins when "tars" produce chemicals that

are known to produce cancer.

Unfortunately

lung cancer can become far advanced before it produces noticeable symptoms.

Surgeon General's Report (1979) states that lung cancer is largely a preventable disease.

The Supreme Court has explained:

One does not have to await consummation of threatened injury to obtain preventive relief.

Estimates: State-level of tobacco tax income

ing in the U.S. Centers for Disease Control report on the "United States Cigarette Smoking Survey," 1987, London in 1988, and in the medical press, 1989, that the smoking rate is dropping.

The tobacco companies have sought to link problems in the products with the burning process rather than with the tar and nicotine. They have also argued that the government is not doing enough to protect the public from the health hazards of smoking.

Smoking is declining in the United States, but the decline is not as rapid as the decline in cigarette consumption. The decline in smoking is due to a number of factors, including the decline in the number of cigarettes smoked per day, the decline in the number of cigarettes smoked per pack, and the decline in the number of cigarettes smoked per person.

ments also have been cut off. With the large influx of money from tobacco, the state has spent only about \$24,000 on tobacco cessation programs.

Montgomery resident Dr. Nowell has been a longtime volunteer at state prisons. He was chairman of the state's anti-smoking coalition committee, which has a state-of-the-art facility in Montgomery. He estimates 40 percent of the inmates are smokers. Nowell said he got some help from the Department of Public Health to open a Kirby stop smoking store and together, and he hopes to get another one. Meanwhile, inmates are lighting up. "Cigarettes are money," said Shipper. "So are stamps in face and about anything you can attach a pack of."
